What types of improvements would you like to see made to the existing skatepark?	Are there any new features you would you like to see added to the existing skatepark?
Hdgssddhd	Bfhehdhe
I think having a renovated skate park, tennis courts or pickle ball courts would be great!	Larger ramps and half pipes
Repair or refinishing of existing features.	My teenage son said he would love to see a concrete bowl installed, if space permits.
It needs to be larger and give more room to get some speed and roll around.	We need bowls, snake run or any type of transition.
If no major design changes are possible: repaved, cracks filled If design changes are possible: we only need one down-rail. move that and place it centered in the platform so it can be skated from both sides. maybe replace the other rail with a down-ledge. also, add quarter pipes at place around the perimeter to increase the flow of the park.	add a small quarter pipe somewhere on the perimeter - maybe replace the three stair in the corner with a quarter pipe.
More space for approach and landing	Mini ramp
Please add lights until about 10pm each night. The ground could be smoothed out a bit.	Just lights.
Quaterpipe	Round rail
Make it a little bigger	A bowl
Halfpipes, more bowl skateboarding,	Curved bowls
Change the stair ledges in the corner by the parking lot into a bank.	Some transition, maybe a mini ramp along the wall of the tennis courts. 4ft high by 8 to 10ft wide please. Or turning the stairs ledges on the corner by the parking lot in a bank, or another quarter pipe. At least a quarter pipe in the tennis court/ basketball court corner
Bowl with pool coping. Get rid of the lawn adjacent skatepark to make room for more features. Snake run would be rad.	Bowl, any transition.
General addition of new features and small improvements. One of the ramp gaps are way too long to make it easily skateable and the rails going down the main square are too tall for use. Shortening them would make the park more fun and easy to use.	A small circle rail around the same size as the flat rail in the park. A small 3-4 foot quarter pipe.
	A dirt pump track for bikes
None, I find the park is perfect as is. Although it is a small park with smaller features, I find it distinctive among surrounding skateparks that are not well kept with difficult features. Shoreview skatepark is one of the most consistently fun parks I visit in the Bay Area. I appreciate the simplicity of the park and how all skill levels have something to enjoy there especially when learning new tricks or warming up before going street skating.	None. An overarching shade structure would be nice on hot sunny days if it would not interfere with easy movement throughout the park.
Fill in the cracks on the floor.	A quarter pipe or some kind of transition.
Layout improvements.	Transition style roll ins to make it easier to gain speed. Lower curb style ledges around the perimeter of the park.
Maybe more ramps but there isnâ€™t much space for them so it would be hard to do.	Ramps or a bowl
Bigger like the Phil Shao skatepark.	Bowls and or ramps
This is a great park. We live a block away and walk by here nearly every day. There are well experienced skaters and they are always very inviting to people of all skills (especially my young children who are learning the proper etiquette of not running in front of riders.	Please maintain the trees to provide shade in the area. Perhaps some features for bikes (like a pump track) if this area will be expanded.
A round flat bar, double sided slappy curb, long quarter pipe instead of the ledge closest to the parking lot, pole jam, no stupid Wormhoundt obstacles. The park is too small for unique, quirky obstacles. Keep it simple and donâ€™t ruin this park.	A round flat bar, double sided slappy curb, long quarter pipe instead of the ledge closest to the parking lot, pole jam, no stupid Wormhoundt obstacles. The park is too small for unique, quirky obstacles. Keep it simple and donâ€™t ruin this park.
Sidewalk to the park!! We would love to see a sidewalk next to the car entrance to the park leading to the building. There is one from one side to the other side of the building but not from entering to the building	We like the park!
tennis court will be more level and smoother. Less crack	Dog park
Fixing of any large cracks and/or rough ground	Some type of mellow transition to keep the park flowing and add diversity to the obstacles.
Add some transition/ramps	Transition/ramps

<p>-to echo others, no Wormhoundt obstacles, keep it simple; the space is small. This can be re-addressed if we are able to extend the park into the tanbark between the skatepark and the parking lot or into the grass area that is adjacent to the basketball courts</p> <p>-we need lights; they don't need to stay on too late; 10ish PM is standard</p> <p>-a bench/hangout area so that non-skaters don't sit on ledges and obstacles</p> <p>-refinished surface similar to Milpitas, Foster City, or Mayfair skatepark in San Jose; be careful that it doesn't suffer the same issues as Fremont skatepark</p> <p>-if the flat fat bar is replaced with a newer one, don't use the large surface area super tall flat bars that were used at Sunnyvale and Redwood City; use 2 3/8's schedule 40 pipes similar to what was used at Waller. If this happens, it could be nice to have it be consistent and replace the down rails with similar sized tubing, but this isn't essential depending on the budget</p> <p>-quarter pipes corner pockets in the corners of the park that are currently planters would be welcome, not too big, but enough to keep speed and have fun, probably around 3.5 - 4ft; a long quarter pipe that stretches along a large portion of the ledge that is closest to the parking lot could be really cool</p> <p>-I think that the pier 7 replica is probably the least skated obstacle, and three of the pier 7 manny pads are unneeded; we could probably keep one, but I would be open to suggestions about what else to use the space for</p> <p>-not so much an improvement, but I believe it's essential to keep a flat bar and a long mid sized ledge in the park regardless of what other changes are made to the park</p> <p>-don't use the rounded soft coping that is used at Red Morton in Redwood City and Fair Oaks in Sunnyvale; it sucks for smith grinds</p> <p>-if the corner with the 3 stair is redone, make sure that there's another slappy curb to replace it</p>	See above
Donâ€™t mess up any of the perfect ledges,	Quarter pipe and round flatbar.
more steps like maybe a 6 step	6 steps
Better run-ups to existing features	turn around quarters / banks (Street inspired) to increase flow
Seems fine	Rentals- bikes, skateboard, scooters
It should be Closed. People are skateboarding in the park after 10pm. There is alcohol and marijuana being used and the majority of the skate boarders skate through the neighborhood often yelling when they leave.	Yes close it and turn the space into Pickleball courts
Lights would greatly improve the usability of the skatepark. Installing lights would allow skaters to continue using the park past dusk and lower the risk of injuries when continuing to skate as the sun is setting. Otherwise, the skatepark is almost perfect with its current configuration. There are very little skateparks in the Bay Area with similar obstacles that are completely oriented to technical ledge & manual skaters. The ledges are of perfect varying heights and grind smoothly. The rails are also great for learning tricks and are perfectly oriented to maintain the flow of the park. I cannot think of small improvements to the park that would NOT change the current flow and configuration.	The current configuration of the park should NOT change. It is easy to flow around the park in circles and hit all the obstacles in one long line. They current ledges are long and are of varying heights, allowing skaters to learn a new trick on a small obstacle and carefully take it to a bigger obstacle. The only feature that would be an excellent addition is a small half pipe or bowl section. But being that these obstacles take up a large area, I would hate to see any current feature be demolished to make space for a half pipe or bowl. The adjacent tennis court and baseball field hardly get any use and if some of that space could be used to expand the skatepark, that would be optimal.
The skatepark is perfect as is. The multitude of skateparks within the greater Bay Area offer plenty of traditional, identical-looking skatepark obstacles from which Shoreview is a breath of fresh air. Its existing layout is ideal for the creatively minded and quick-footed skater/scooter rider/biker and should be preserved accordingly. The only thing that could possibly improve the skatepark is an expansion of the total surface area to open up some of the tighter corners (notably, the corner entrance parallel to the sidewalk running down the third baseline of the baseball field). That said, I would be perfectly content with the skatepark and surrounding park remaining untouched.	Noâ€™the skatepark is perfect as is.
None	No
No changes to the existing park. Add more skatepark where the basketball or tennis courts are. This skatepark is very good.	No
None	Nothing
Keep it how it is	No
Id rather the park remain as is, I like the features and if anything add on to the park rather than tear anything out	
Nothing, it is perfect unless its expanded into the unused tennis and basketball courts	no
I think the current skatepark is very good and also very different than surrounding skateparks, I would like the park to stay the same since new skateparks being built are all very similar. Shoreview is a very fun skatepark that offers different obstacles compared to other local skateparks.	Lights
Less cracks, better ground	More space, more transition, and more obstacles
Less cracks and smoother pavement	I would like see to a quarter pipe added so it flows with the park. I also suggest making the park have more room so it can fit the quarter pull-ups and so thereâ€™s more landing space for the euro.
Want to see a more diverse usability. More features for roller skating and biking etcâ€™; rather than exclusively for skateboarding	
Iâ€™d like to see more Ramps because the park is pretty flat right now	Quarter pipes to flow around the park better. Smoother ground
Cracks patched most importantly, if possible extend the park into the unused tennis court.	Curb, small quartepipe for beginners.
We tended to go to the skatepark at Beresford park instead with our kids. Perhaps incorporate some of the design elements from Beresford? The tennis court adjacent to Shoreview skatepark is in bad shape - it would improve the overall appeal of the park by resurfacing the tennis court as well.	Add features that also appeal to bmx?
The three planter boxes in the corners are completely unused. Two quarter pipes and a grindable bank could be added in their place.	3 foot quarter pipe, 4 foot quarter pipe, 3 foot grindable bank
Need some transition badly (Quarter pipes ,half pipes ,hips) The majority of this skate park can be found in the streets. San Mateo has been starved for anything with transition for far too long.	As noted above any type of transition with coping.

<p>Shoreview skate Park is a very special, iconic skate park for the Bay Area skateboarding community a paragraph when it was first built. It set a new president for how skate parks should be built: some thing that feels open, inviting, inclusive, and for what majority of skateboarders are (Street Skaters, not skate park skaters)</p> <p>Unfortunately, when the park was built, Whiting was left out due to noise concerns even though the basketball court turned out to be much louder than the skateboarding area.</p> <p>Another unfortunate thing about the Chavez Skate Park is the size, its footprint is significantly smaller than the nearby amenities, such as the baseball field, basketball, courts, and tennis court.</p> <p>in a dream world, we would get to expand into the tennis court since the tennis court is almost inactive</p> <p>It feels only right for us to be able to move into that space given the fact that the skateboarding community was promised a third skate park over 20 years ago.</p> <p>I do realize that there is a recent trend with Pickleball, and that now , they might have a chance to take care of the tennis court, but we have asked in the past to be able to expand of the tennis court or before pickle ball was ever a thing.</p> <p>Another option would be to expand to the grass area in front of the basketball, courts, it would be a rather sustainable approach since grass is not the most sustainable thing given water restrictions.</p> <p>We also need lighting for nighttime skateboarding desperately</p> <p>People still skate there at night, and itâ€™s not as safe as if it could be if there was proper lighting.</p> <p>Lastly, the ground, it definitely needs to be redone. Itâ€™s very rough, uneven, and has huge cracks.</p>	<p>If an expansion as possible, more flat, ground area, and more ledges</p>
<p>Possible redo the groundâ€™. Other than that, leave it as is</p>	<p>No</p>
<p>Resurfacing the current concrete structures without much change to the layout, like that of Newark or Fremont skatepark. Changing the square rail at the back to a round rail.</p>	<p>Small 2.5 foot tall quarter pipe transitions on the parking lot and tennis court sides to help with flow back and forth over the manual pad.</p>
<p>More space to skate!</p>	<p>More transition in the park</p>
<p>Expanding the park, proper lighting, keeping it true to the original design</p>	<p>Lights and expanding. Redoing the ground.</p>
<p>The ground redone and the park extended wider. I have skated this park for over 20 years and we have never had lights like the basketball court and tennis court have. Please add lights til at least 10pm like other parks.</p>	<p>Add an extension where the grass is between the basketball court and parking lot. The opposite side of the park, add a quarter pipe to get speed for the ramp up.</p>
<p>Additional open space with smooth ground, lighting.</p>	<p>No</p>
<p>Replace the ground, lighting like basketball courts. Expand the skatepark to the tennis court. Keep it as street skatepark.</p>	
<p>make it bigger but keep it the same style (â€œsteetâ€™-style obstacles), re-do the ground, and lighting at night.</p>	
<p>Bigger and higher ramp.</p>	<p>Bigger and higher ramp</p>
<p>Would it be possible to color or treat all of the concrete edges to make them more visible, esp. at night?</p>	<p>If it doesn't make it harder to skate there, perhaps some shade canopies?</p>
<p>More space and some transition (quarter pipes).</p>	<p>Yes. Transition. As in quarter pipes.</p>
<p>Bulletin board for posting community events and or job opportunities</p>	<p>Bench seating</p>
<p>I would like to see some ramps or a half pipe or bowl, and for the pavement to be smoother</p>	<p>A ramp or bowl would be awesome!</p>
<p>Smooth concrete, like the surfaces at Newark and Fremont skateparks</p>	<p>Yes! I would love to see a mini half-pipe and a mini bowl</p>
